

What is

COVID-19

Breakthrough Infection?

WHEN A VACCINATED PERSON GETS COVID-19, IT'S CALLED A BREAKTHROUGH INFECTION.

EVEN WHEN BREAKTHROUGH INFECTIONS HAPPEN, THE VACCINE STILL PROTECTS ALMOST ALL VACCINATED PEOPLE FROM BECOMING SERIOUSLY ILL, HOSPITALIZED, OR DYING

You Can Prevent Breakthrough Infection

- ✓ **WASHING YOUR HANDS FREQUENTLY**
- ✓ **AVOIDING GATHERINGS WITH MANY PEOPLE WITHOUT A FACIAL MASK**
- ✓ **STAY UPTO-DATE WITH YOUR VACCINES.**

Protect Your Self and Your Community. Get Vaccinated

Handwashing

This work is funded by the Clayton County Commissioner Board (ARPA Grant xxxx)
